Learning Outcome:
Nurses working with patients at the bedside and other healthcare settings will be able to identify best practice in medication administration and safe medication administration practice.

Objectives:
- Identify at least five new drugs commonly used in practice.
- Identify common adverse drug errors and how to prevent them.
- Recognize the most common drug interactions.
- Identify common drugs that are incompatible and the nurse’s role in medication administration.
- Discuss the types of drugs that may cause serious problems in patients if not identified.
- Discuss the principles of safe medication administration.
- Identify situations where drug interactions/errors are preventable.
- Discuss several methods to decrease dosage calculation/drug interaction.
- List three of the basic dosage calculation formulas for safe medication administration.

IMPORTANT: In order to receive CHs/CEUs, all participants are required to attend the entire workshop, complete all in-session program assignments, complete an evaluation form, complete and return a post-program SurveyMonkey® questionnaire and/or complete and return a post-program checklist, where applicable.

You will need a personal computer and internet access to attend.
Pharmacology Review: Maintaining Your Competence

February 21, 2023
Zoom Online Meeting

Registration deadline Feb. 14
